Screening can reduce deaths from cervical cancer by 80% or more among screened women. Even a single screening between the ages of 30 and 40 can reduce a woman’s lifetime risk of cervical cancer by as much as 25% to 36%.\(^1\)

- Preventing cervical cancer through screening is one of the WHO’s “best buys”.\(^2\)
- Two vaccines are available to prevent multiple strains of HPV that cause 70% of cervical cancer cases.
