We are working in what some describe as the most complex health challenges, bringing together a broad range of partners to engage in bold and innovative ways. Ongoing partnerships and collaboration is critical in addressing the most pressing global health issues ranging from access to diagnosis, treatment and vaccines to sustained care for people affected by conditions such as HIV/AIDS, TB, and malaria. The biopharmaceutical industry recognizes that to achieve these Sustainable Development Goals (SDGs), we must continue to work with myriad partners, including governments, public and private development organizations, international organizations, the non-profit sector, and academia, to ensure that we reach the world’s most underserved communities.

Our diverse partners include:

- **Public sector:** Governments, international organizations, development organizations, academia, and non-profits
- **Private sector:** Biopharmaceutical companies, private foundations, industry associations, and others
- **Civil society:** Non-profits, foundations, and others
- **Communities:** Marginalized and indigenous people, women, children, youth, and people with low incomes

Our collaborations support the SDGs through:

- **Healthy lives and wellbeing:** Programs supporting Universal Health Coverage, and health service delivery
- **Sustainable Future for all:** Programs that reduce inequalities, and health service delivery
- **Quality education:** Programs that promote wellbeing and learning
- **Decent work and economic growth:** Programs that strengthen health systems and build long-term capacity
- **Sustainable cities and communities:** Programs that promote wellbeing and learning

We are continually building upon our partnerships and collaborations, which number over 600, and our programs are tailored to the range of different population groups they are working in. We support a diverse set of initiatives in nearly 100 countries across all 2030 Agenda for Sustainable Development Goals (SDG) targets.

By working with and through partners, we are able to innovate and share insights, including developing and supporting joint programs and initiatives that are tailored to the needs of communities at the local, national, and global level. To date, we have supported 40 NTDs, one out of every five of these programs are in Africa and over 60 programs are working on over 250 cross-sector partnerships.

Collaboration is key to our work, and we are committed to doing our part in the fight against NTDs as well as Universal Health Coverage. We are committed to achieving our 2030 Agenda for Sustainable Development Goals (SDG) targets by supporting a range of different initiatives, including health service delivery, promoting awareness and linking prevention strategies.

The biopharmaceutical industry recognizes that to achieve these SDGs, we must continue to work with myriad partners, including governments, public and private development organizations, international organizations, the non-profit sector, and academia, to ensure that we reach the world’s most underserved communities.

Innovation and Partnerships

**Tropical Diseases:**

- **Collaborating to end Neglected Tropical Diseases:** We work to ensure that the world’s most underserved communities have access to diagnosis, treatment and vaccines, and that people affected by conditions such as HIV/AIDS, TB, and malaria are treated.

**Urgency:**

- **IFPMA member organizations and our programs are working on over 250 collaborations on Global Health Progress:** We aim to reach the world’s most underserved communities, bringing together a broad range of partners to engage in bold and innovative ways.

**Collaborative:**

- **Our programs are working on over 250 cross-sector collaborations:** We aim to reach the world’s most underserved communities, bringing together a broad range of partners to engage in bold and innovative ways.

**Diseases & Populations We Target:**

- **We are working on over 250 cross-sector partnerships:** We aim to reach the world’s most underserved communities, bringing together a broad range of partners to engage in bold and innovative ways.

**Explore the full range of our collaboration on Global Health Progress and see how we are addressing some of the most complex health challenges.**
