

Working together to translate words into *action*:

NCD PREVENTION, TREATMENT AND CARE

73rd United Nations General Assembly — Side Event

Building on dialogue from the United Nations General Assembly 2017 and World Health Assembly 2018, IFPMA and Access Accelerated invite you to join the side event, “*Working together to translate words into action: NCD prevention, treatment and care.*”

Our objective is to convene leaders in non-communicable diseases (NCDs) to discuss how to address the systemic challenges holding back decisive action on NCDs and opportunities to strengthen commitment, capacity and action at the global, national and community level.

Together with global and local partners, we invite you to join an open, honest discussion about collective solutions and how commitments can be translated into effective actions.
