WIPO Committee on IP and Development (CDIP 35): Technology Transfer

20 NOVEMBER 2025, GENEVA – Technology transfer in the pharmaceutical sector is a complex and resource-intensive process. It requires significant technical expertise, time, and investment, as well as a robust, stable, and predictable intellectual property framework, which is the cornerstone of all licensing arrangements. Equally important is the identification of expert and experienced partners. Our experience has shown that voluntary and mutually agreed collaborations offer the most effective and sustainable path to successful technology transfer, ensuring quality, safety, and long-term access to medicines and vaccines.

During the COVID-19 pandemic, the biopharmaceutical industry entered over 450 voluntary partnerships for vaccines and therapeutics. Additionally, IFPMA's [Global Health Progress](#) resource hub highlights over 300 collaborations between the innovative pharmaceutical industry and more than 1100 of our global stakeholders to support the Sustainable Development Goals (SDGs).

Beyond technology transfer, the biopharmaceutical industry employs a range of mechanisms to expand access, including tiered pricing, product donations, public-private partnerships, and voluntary licensing. We therefore encourage Member States to maintain flexibility and to engage constructively with industry partners to identify solutions tailored to local needs, demand, and disease priorities.

To further facilitate access, we urge efforts to strengthen innovation ecosystems, promote open trade, reinforce supply chain resilience, and enhance regulatory capacity. These enabling conditions, combined with sustained health financing and political commitment, are essential to building long-term capacity and resilience in health systems.

We would like to take this opportunity to thank WIPO Secretariat for inviting IFPMA and its members to the Committee's conference in May this year. Engaging with private sector and key stakeholders is essential to understanding the nuances and fostering trust and we hope that this collaboration would continue to be encouraged.

IFPMA and its members remain committed to sharing experience and supporting voluntary, collaborative initiatives that advance global health.
